

## A list of drosophilid flies collected in Shimane Prefecture, Japan

Yusuke MORITA<sup>1</sup>, Takehiro K. KATOH<sup>2</sup>, Masayoshi WATADA<sup>2</sup> and Machiko HATSUMI<sup>1</sup>

**Abstract** We collected drosophilid flies in the east region of Shimane Prefecture including the Oki Islands, Japan from 2011 to 2015 by two collection methods, net sweeping and fermented banana bait traps. A total of 73 drosophilid species belonging to 17 genera were recorded (59 species belonging to 17 genera in the Oki Islands and 55 species belonging to 12 genera in the mainland of Shimane). Following 13 species belonging to 10 genera were newly recorded from Chugoku region; *Amiota dispina*, *Leucophenga acutipollinosa*, *Microdrosophila maculata*, *Dichaetophora pseudotenuicauda*, *Mycodrosophila erecta*, *M. japonica*, *M. shikokuana*, *Paramycodrosophila nakamurai*, *Scaptomyza elmoi*, *Zaprionus aungsani*, *Hirtodrosophila nudinokogiri*, *Drosophila imaii* and *D. oshimai*. Combining with previous reports, 87 species belonging to 19 genera of drosophilid flies were recorded. This covers 28% of Drosophilidae species distributing in the whole land of Japan.

**Keywords :** the Drosophilidae, faunal survey, new records, Shimane, Oki Islands.

### Introduction

Drosophilid fauna was intensively studied several area in Japan, for example, Hokkaido, Tokyo, Ryukyu Islands, Ogasawara Islands and Ehime Prefecture (Okada, 1988; Toda, 2012; Beppu, 2000, 2005, 2006; Okada, 1965; Hirai et al., 2000; Kondo and Kimura, 2008; Watada et al., 2011, Watada et al., 2000; Hoshina and Watada, 2001; Katoh and Watada, 2012, 2013) and summarized as the web database of DrosWLD-Species by Toda. However, in the southwestern mainland of Japan, the faunal survey had rarely been carried out, especially the side of Sea of Japan (Wakahama, 1964; Kanegae et al., 2012).

Here we report the distribution of drosophilid species in Shimane Prefecture located in the Chugoku region, southwestern part of the main Honshu Island. The area of Shimane is approximately 6,700km<sup>2</sup>, including 346km<sup>2</sup> of the Oki Islands comprising four main and numerous small islands located about 50km apart from the mainland

of Shimane. Shimane Prefecture faces to the Sea of Japan on the north side and to Chugoku Mountain range (about 500 to 1,500m in elevation) on the south side bounded on Hiroshima Prefecture, and is a part of the San-in region consisting of the northern part of the Chugoku region facing the Sea of Japan. These geographic conditions make the climate characteristic of the San-in region, such as cloudy winter and humid summer. The surveys of drosophilid flies in Shimane Prefecture were carried out by Wakahama (1964) and Kanegae et al. (2012), however these surveys were only made around Matsue-Shi in Shimane mainland, and the other regions including the Oki Islands are left to be unknown. We collected and identified drosophilid flies in the Oki Islands and the east region of Shimane mainland in order to know the drosophilid fauna in the San-in region including isolated islands, the Oki Islands.

### Fly collection

Fly collection was made by net sweeping and fermented banana bait traps. A total number of collection spots were 34, of which 19 and 15 spots were in Oki Islands and Shimane mainland, respectively (Figure 1). The

<sup>1</sup> Department of Biological Science, Faculty of Life and Environmental Science, Shimane University.

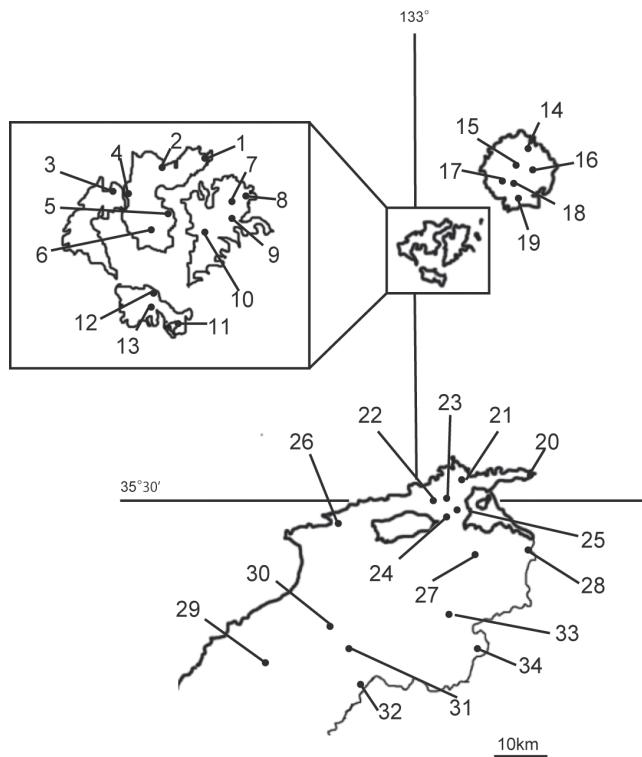

<sup>2</sup> Department of Biology and Environmental Science, Graduate School of Science and Engineering, Ehime University.

collection was made from June to October except the spots of Inland of Shimane Prefecture (September to October). Following 12 sites, the collection was made by only net sweeping: Minami (Ama-Cho), Shin-Okudani (Okinoshima-Cho), Mt. Makuragi (Matsue-Shi), Mt. Shin (Matsue-Shi), Nishimochida-cho (Matsue-Shi), Mt. Yogai (Yasugi-Shi), Mt. Sanbe (Oda-Shi), Ryuzuga-taki (Un-nan-Shi), Yae-daki (Un-nan-Shi), Mt. Oyorogi (Iinan-Cho), Mt. Tamamine (Okuizumo-Cho) and Mt. Sentsu (Okuizumo-Cho). At the other sites, the collection was made by net sweeping and traps together.

## Results and discussion

A total of 73 species belonging to 17 genera were recorded in this study. In the Oki Islands, 60 species belonging to 17 genera and in the mainland of Shimane 54 species belongs to 12 genera were recorded. The number of species and genera collected in Oki Islands was larger than that in the mainland of Shimane, and it may be due to more frequent net-sweeping collection in Oki Islands. Twenty one species belonging to 14 genera were newly recorded in Shimane Prefecture and the following 13 species belonging to 10 genera were newly recorded from the Chugoku region: *Amiota dispina*, *Leucophenga acutipollinosa*, *Microdrosophila maculata*, *Dichaetophora pseudotenuicauda*, *Mycodrosophila erecta*, *M. japonica*, *M. shikokuana*, *Paramycodrosophila nakamurai*, *Scaptomyza elmoi*, *Zaprionus aungsani*, *Hirtodrosophila nudinokogiri*, *Drosophila imaiii* and *D. oshima*. Table 1 summarizes the drosophilid species recorded in Shimane Prefecture by previous studies (Okada, 1988; Kanegae et al., 2012) and this study. As a result, 87 species belonging to 19 genera were recorded in Shimane Prefecture. In the whole land of Japan, 312 drosophilid species was recorded in the web database of DrosWLD-Species and the number of species recorded from Shimane covers 28% of it. In order to understand Drosophilid fauna in Shimane Prefecture, it is required to collect flies in spring and summer at inland of Shimane Prefecture.

A list of drosophilid flies is shown in the following section, with collection localities and methods **T** and/or **S**. **T** means collected by banana bait traps and **S** means collected by net sweeping.

**Figure 1.** Geographical distribution of collection localities in Shimane Prefecture. Numbered localities correspond to follows:  
1 Uka (Nishinoshima-Cho), 2 Mimiura (Nishinoshima-Cho), 3 Funabiki (Nishinoshima-Cho), 4 Mita (Nishinoshima-Cho), 5 Oyama (Nishinoshima-Cho), 6 Mt. Takuhi (Nishinoshima-Cho), 7 Mt. Kinko-ji (Ama-Cho), 8 Toyoda (Ama-Cho), 9 Hobomi (Ama-Cho), 10 Minami (Ama-Cho), 11 Kurii (Chibu-Mura), 12 Shoyo-ji Temple (Chibu-Mura), 13 Usuge (Chibu-Mura), 14 Shin-Okudani (Okinoshima-Cho), 15 Kori, (Okinoshima-Cho), 16 Mt. Daimanji, (Okinoshima-Cho), 17 Dangyo-notaki, (Okinoshima-Cho), 18 Kamenohara Water Bird Park, (Okinoshima-Cho), 19 Kamo, (Okinoshima-Cho), 20 Jizozaki (Matsue-Shi), 21 Mt. Makuragi (Mastue-Shi), 22 Mt. Shin (Matsue-Shi), 23 Nishimochida-cho (Matsue-Shi), 24 Rakuzan Park (Matsue-Shi), 25 Mt. Dake (Matsue-Shi), 26 Bessho-cho (Izumo-Shi), 27 Mt. Hoshigami (Matsue-Shi), 28 Mt. Yogai (Yasugi-Shi), 29 Mt. Sanbe (Oda-Shi), 30 Ryuzuga-taki (Un-nan-Shi), 31 Yae-daki (Unnan-Shi), 32 Mt. Oyorogi (Iinan-Cho), 33 Mt. Tamamine (Okuizumo Cho), 34 Mt. Sentsu (Okuizumo-Cho).

*Drosophila immigrans* Sturtevant, 1921, Carnegie Inst. Publ., 301: 83.

Specimens examined. Uka, Mimiura, Funabiki, Mita, Oyama, Mt. Takuhi, Mt. Kinko-ji, Toyoda, Hobomi, Kurii, Shoyo-ji Temple, Usuge, Kori, Mt. Daimanji, Dangyo-no-taki, Kamenohara Water Bird Park, Kamo, Nishimocidacho, Rakuzan Park, Mt. Dake, Bessho-cho,

Mt. Hoshigami, ST.

*Drosophila busckii* Coquillett, 1901, Ent. News, 12: 16.

Specimens examined. Mita, Mt. Kinko-ji, Kurii, Mt. Daimanji, Kamo, Kamenohara Water Bird Park, Jizo-zaki, Rakuzan Park, Mt. Hoshigami, ST.

## Acknowledgement

We are thankful to Mr. S. Enomoto, Mr. M. Sawa, Ehime University, and Mr. N. Abe, Kagawa University as well as Ms. Y. Maeda, Mr. S. Osugi, Mr. R. Hasegawa, Mr. Y. Ikegami and other members of the Hatsumi Lab, Shimane University for collecting flies and Professors, K. Otsu and T. Hirohashi, Oki Marine Station of Shimane University for kindly allow us to use facilities. The authors also thank the faculty of Life and Environmental Science in Shimane University for help in financial support for publishing this report.
